Read the selected topic article by James, Geller, Bernhardt, Doksum, and Holtzman (1998) titled: “Are Practicing and Future Physicians Prepared to Obtain Informed Consent? The Case of Genetic Testing for Susceptibility to Breast Cancer.” Then respond to the following questions about quantitative research methods in a 750-1000-word essay.

1. Discuss the main research question and findings in the study.
2. One of the recommendations for incorporating informed consent topics in medical school is by using small group discussions and simulated patient interactions (James et al. (1998). design and describe brief intervention/ experimental study, which you will then test for effectiveness amongst medical students at JHMI.
3. What are the strengths and weaknesses of your study compared to the direct observation approach carried out by James et al. (1998).
4. Discuss any ethical issues (protection of human subjects) related to the study.
